

# FreeRDS and its X friends

David "Hardening" FORT  
[contact@hardening-consulting.com](mailto:contact@hardening-consulting.com)  
XDC 2014

# About the author

- **A linux and OSS addict since 1994.**
- **Doing security software most of my career. Now independent consultant - <http://www.hardening-consulting.com/>.**
- **Active FreeRDP and FreeRDS developer.**
- **The author of the « famous » wayland RDP compositor.**

thin**cast**<sup>®</sup>  
Technologies GmbH

# Agenda

- **FreeRDS architecture overview**
- **Xrds**
- **Wayland FreeRDS compositor**

# FreeRDS

# FreeRDP > RDP protocol (1/2)

- **Quite old and 90s tainted protocol**
  - **slow/fast path**
  - **weird ROP**
  - **funny bits saving**
- **Almost all specs are « public »**

- **Security used to be an option**
- **Vector operations in the past, codecs now**
- **Channels : printing, bi-directional sound, serial port redirection, drive sharing, remote coffee ?**

# FreeRDS > the project

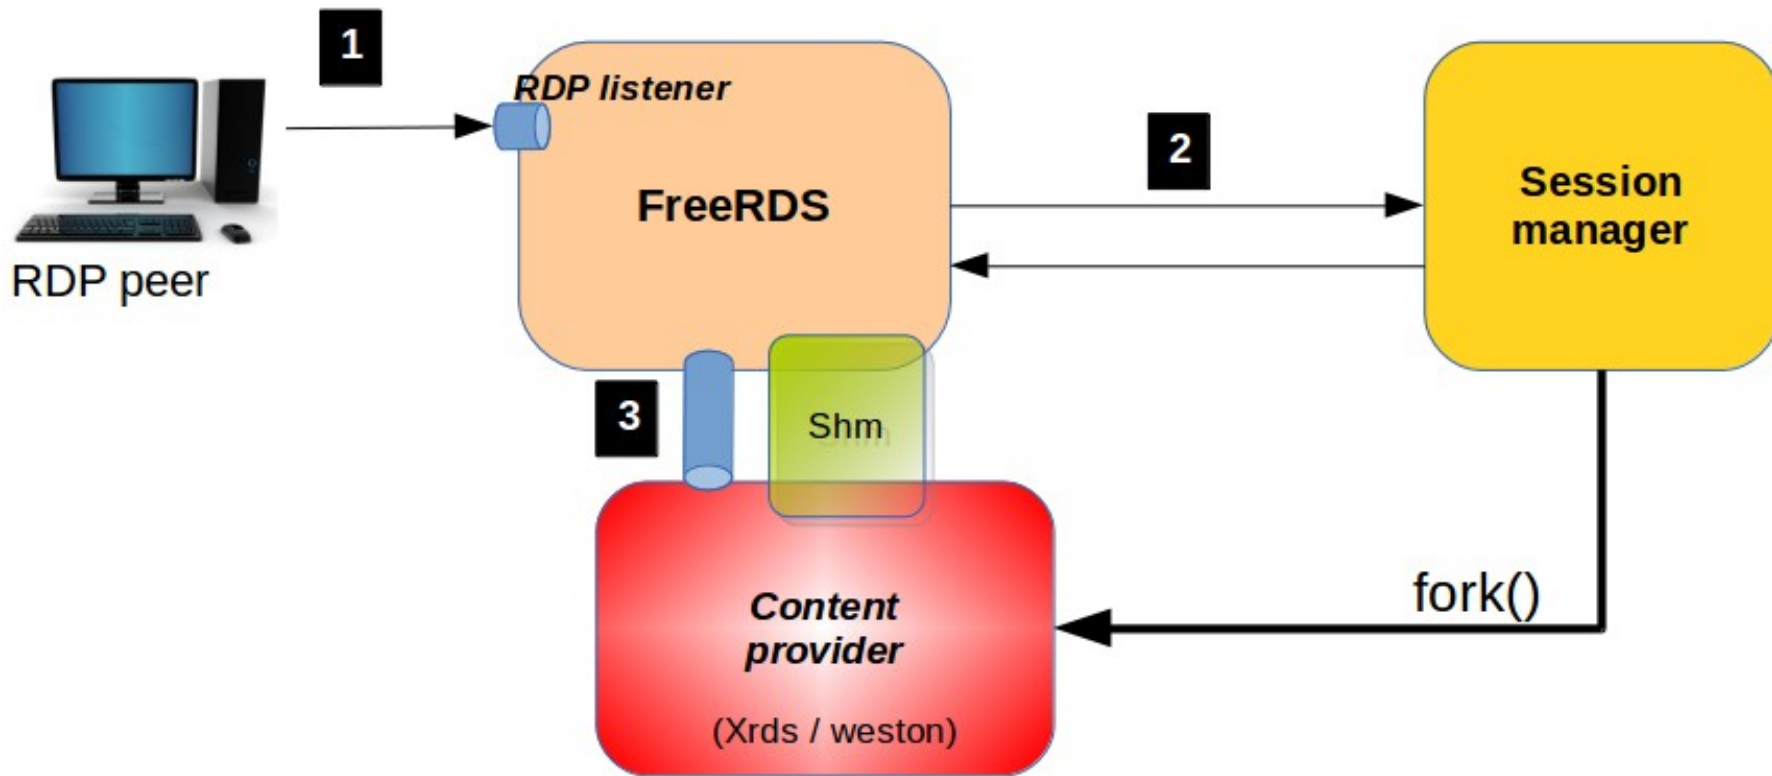

- **An OSS RDP server (Apache2 licence)**
- **To be (fully) published soon**
- **Inspired by Xrdp but based on FreeRDP**
- **Young (2013)**

- **Security : RDP4, TLS, NLA**
- **Encoding : raw bitmap, planar codec, remoteFx**
- **External channel handling**
- **Session reconnection**
- **Session shadowing**

# FreeRDS > entities

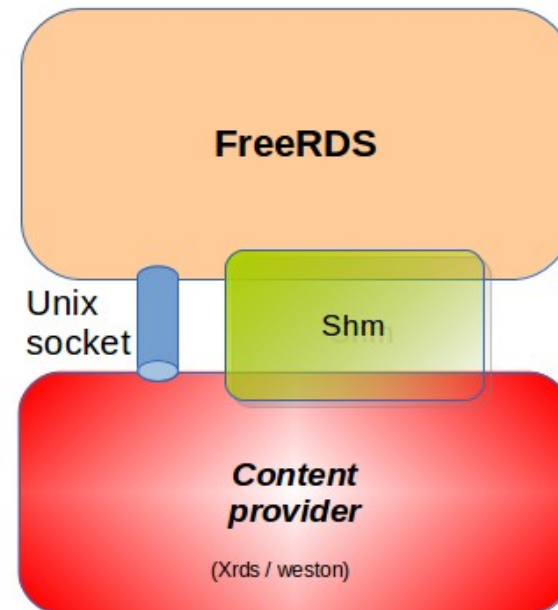

- **Written in C (FreeRDS) and C++ (sessionManager), CMake**
- **Based on FreeRDP**
- **Linux for now but targets multi-platform**
- **Protobuf, thrift and D-Bus**
- **A library to help building content providers**

# FreeRDS > under the hood (1/3)

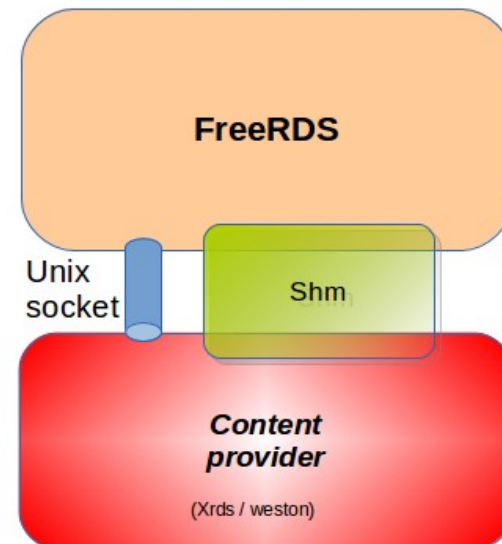

- **Unix socket as a control channel**
  - Signaling messages
  - Mouse moves
  - Key presses
- **Shared memory**
  - Framebuffer
  - Damaged regions

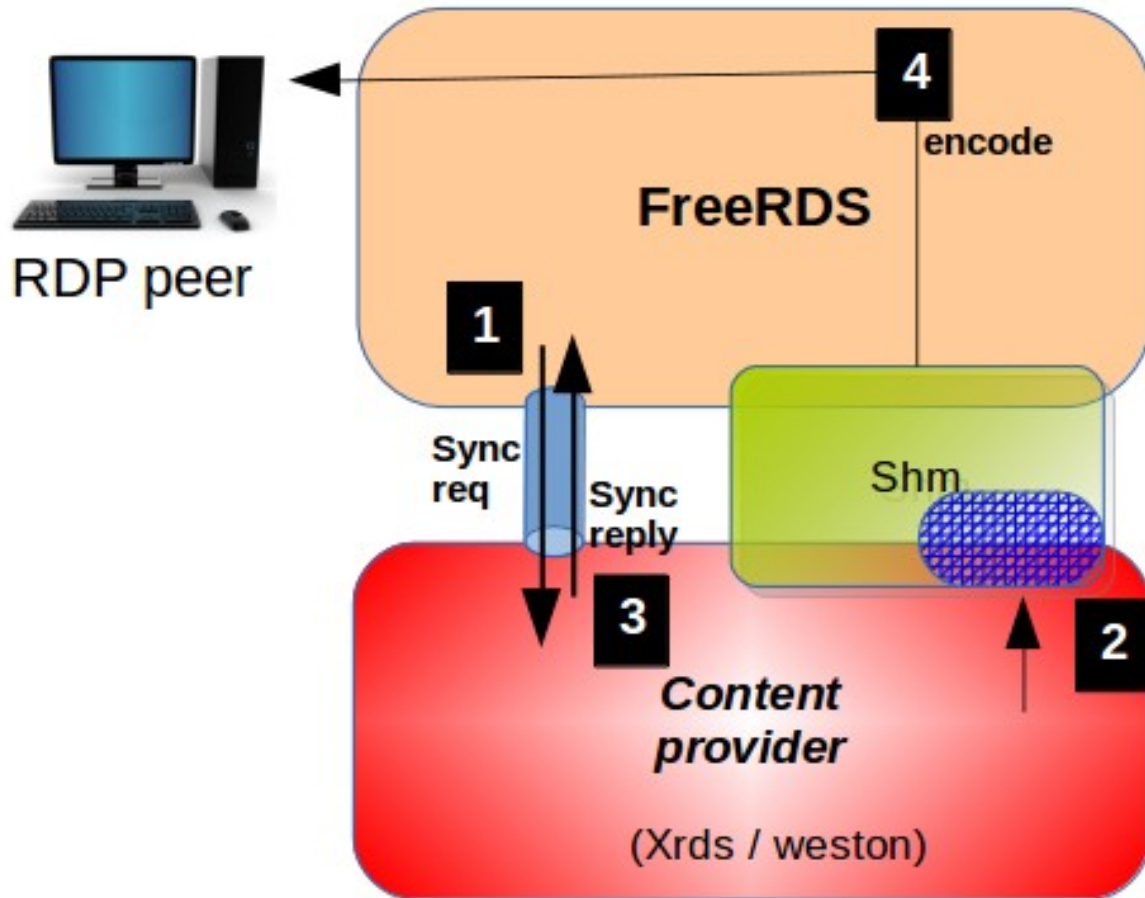

# FreeRDS > under the hood (2/3)

- **At connection, FreeRDS sends**
  - **Version**
  - **Screen depth / size**
  - **Keyboard layout**
- **Content provider answers**
  - **Byte / bits per pixel**
  - **Scanline**
  - **Size**

# FreeRDS > under the hood (3/3)

# FreeRDS > key points

- **FreeRDS does RDP**
- **Content provider creates the visible content**

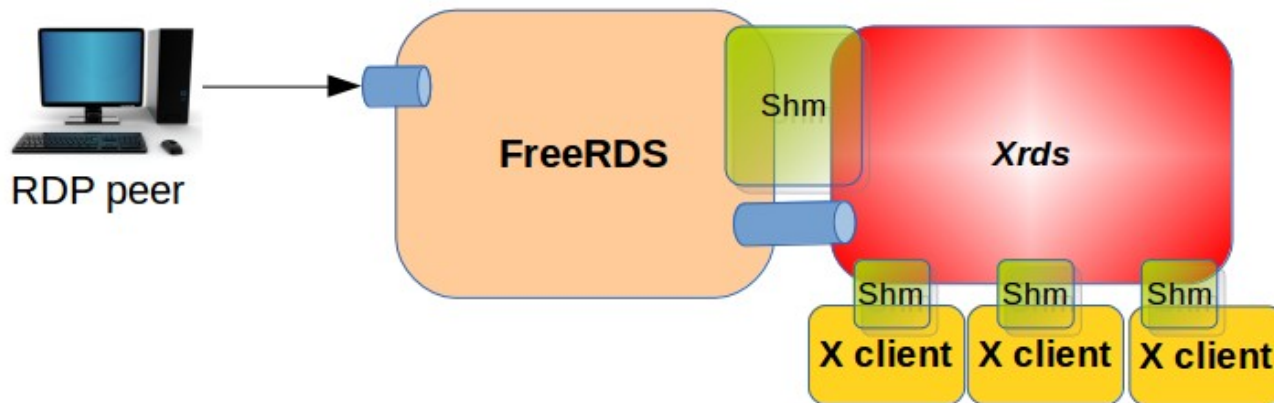

# Xrds

- **X11 content provider**
- **A headless X server like x11vnc**
- **FreeRDS DDX, (currently) based on Xorg 1.15**
- **Links against the content provider helper library**

- **One mouse (client side pointer)**
- **One keyboard : a xkb layout for the remote RDP keyboard layout**
- **Functional xrandr**
- **External program (channel) for clipboard**
- **Supports reconnection**

So...

I love it when a plan comes together

- **Fake modelines, timing, EDID block**
- **Use the right unit**
- **Race conditions**
- **Shut up the Desktop Environment**

# Xrds > crazy pointer update

- **Problem : application updating pointers at a mad rate**
- **Solution : check pointer changed (pointer cache)**

# Xrds > damage is not damaged

- **Problem : old flash player constantly updates the whole screen when the video is paused**
- **Solution : frame comparison**
  - **Split damage in 32x32 tiles**
  - **Compute the real damage**
- **Nice gains even with a fullscreen video**

- **Full X11 environment under FreeRDS**
- **Gains for other content providers**

# FreeRDS compositor

- **A FreeRDS backend for weston**
- **An advanced prototype**
- **Your remote desktop running weston**

- **Uses the pixman renderer**
- **1 seat (except with shadowing)**
- **Maps the RDP layout to a XKB layout**

# FreeRDS compositor > key points

- **Works**
- **Give it a try !**

**Next...**

- **Add support for extended RDP input to weston / Xrds (multitouch)**
- **RDP clipboard in weston**
- **Graphics with the egfx channel**

# Questions ?
